This rare derecho ds. This caused se stronger portions of Heavy Rain Source: Trained Spotter		

One tree fell, house siding was damaged, a chimney was knocked over, and a chicken coop was damaged due to thunderstorm winds.

Thunderstorms developed during in an increasingly unstable airmass ahead of a shortwave trough. Some of these storms became

severe with damaging winds and large hail being the main threats.

A very hot and potentially unstable airmass interacted with northwesterly flow aloft to produce a derecho across northern Illinois. This derecho then moved rapidly east southeast across the Ohio Valley producing widespread straight line wind damage. This rare derecho affected nearly every county in southeast Indiana, northern Kentucky, and southwestern Ohio with severe winds. This caused widespread power outages that lasted several days in some locations. Isolated large hail also occurred with the stronger portions of the system.
